Instant Printer

Designed to accommodate the Copal range of printers, the Digicube uses Whitech's renowned Phototeller software to create a variety of images from the STD sizes produced by the printers

VENDING Coin Units

In New Zealand and Australia there is an optional Coin reader module with change dispenser. This allows customers to print prints without requiring in-store access. Coin units accept all 6 coinage values. A note/ bill acceptor is also available as an additional option to the coin units.

Credit Card & EFTPOS

DPS EFTPOS enabled. This requires ADSL/Mobile internet, and an account with DPS.

DIGICUBE

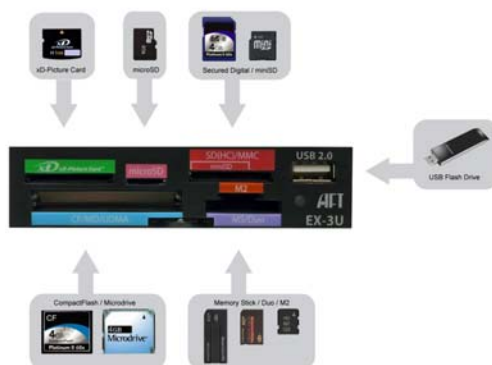

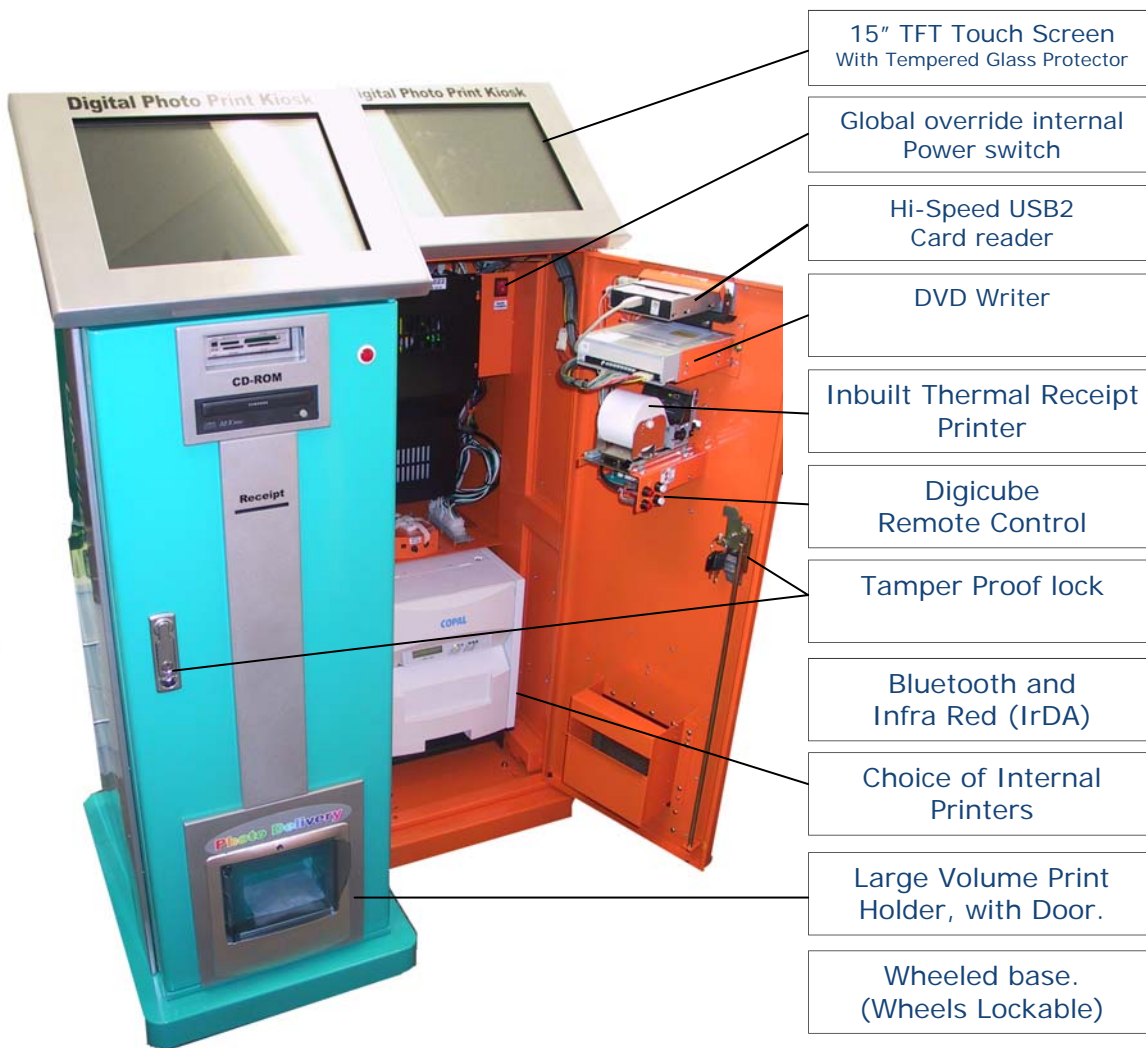

Upgrade Paths & Future Proofing:

The kiosk comprises of basic units, which enables the owner to change/modify it to suit the fast changing needs that the Digital world requires.

The entire PC component can be easily replaced/updated by even your local PC Tech. Being Windows based, you can easily load the latest version of the kiosk software onto the unit, and have a system that compares admirably with the models on the market in the future, at a fraction of the cost.

Card readers can be changed easily, making it simple to keep up with the ever changing world of digital media. Even the add on features available can be added at a later date when the need for them arises.
